
DefectCon vs BGAD at low false-alarm budgets (3 training seeds, 10 partitions)
(a) Mean ROC, held-out test set
True positive rate
False positive rate (%)
crossing
4.72%
FPR = 5%
DefectCon
BGAD
(b) Paired pAUC difference vs upper bound
Paired difference in McClish-standardized pAUC
Upper FPR bound of the partial AUC (%)
±1 SD over 10 partitions
pAUC_DefectCon − pAUC_BGAD
10/10 partitions (p = 0.0020)
sign change
11.7%
FPR = 5%
